

The background features a dark blue gradient with faint, light blue geometric patterns. These include several concentric circles of varying sizes, some with dashed lines, and curved arrows indicating a clockwise or counter-clockwise direction. The overall aesthetic is technical and modern.

COMPARING PICTURE-AIDED TRANSLATION WITH STORYBOARDS

A CASE STUDY ON THE TYPOLOGY OF COMPARISON

Golsa Nouri-Hosseini
University of Gothenburg

Elizabeth Coppock
Boston University

Université de Paris Diderot
November 2017

INTRODUCTION

- Semantic Fieldwork: Challenging
- Which methodology works best for eliciting data?
 - Standard semantic elicitation techniques
 - Storyboards
 - Picture-aided Translation

TAKE HOME MESSAGE:
PICTURE-AIDED TRANSLATION TASKS WORK BETTER THAN
STORYBOARDS FOR SOME PURPOSES.

Picture-aided Translation vs. Storyboard

Storyboard

1.

2.

3.

ADVANTAGES OF STORYBOARDS

(BURTON & MATTHEWSON, 2015)

- Spontaneous, natural utterances
- Minimal contact-language influence
- Do not need verbal context description, which minimizes misunderstanding of the context

HISTORY OF OUR PROJECT

- We started with a translation method.
- We intended to develop storyboards
- But they proved to be difficult to use.
 - In storyboards people forget the story.
- So we started looking into a compromise between translation and storyboards.

TRANSLATION QUESTIONNAIRE

Please translate this short story!

Please translate the sentences below into your native language. More literal translations are preferred, but only as long as they sound natural. Give as many translations as you like, and comments are welcome but not required.

Most of the kids who go to my school like to play music. *

(For example, there are 100 kids in my school, and 65 of them like to play music.)

Of all the kids in my school, I'm the one who plays the most instruments. *

(For example, I play 7 instruments, two of my friends play 6 instruments, and lots of people play one or two instruments, but nobody else plays more than 4.)

I don't like most of the music they play on the radio. *

My brother Hans also plays many instruments, but not more than me. *

PURE TRANSLATION TASK

Advantages

- Convenient
- Easily improved
- Fast

Disadvantages

- High risk of misinterpretation
- Difference between the spoken and written forms of the language (ex: Persian, different dialects of Arabic)
- Writing is cumbersome for the participants

Picture-aided Translation

5) Among the three kids, he was the one who climbed the tallest tree, so he won the contest.

6) Anna lost because she climbed the shortest tree.

RESEARCH QUESTIONS

The background is a gradient of deep blue and purple, speckled with white dots resembling a starry sky. Overlaid on this are several faint, white geometric patterns. In the top right, there is a large circular scale with degree markings from 0 to 210 and concentric circles. In the bottom right, there are concentric circles with arrows indicating a clockwise direction. In the bottom left, there are partial concentric circles and a dashed arrow pointing left. In the top left, there is a small circular arc.

RESEARCH QUESTIONS

1. Does the presence of the text (PT vs. SB) make data elicitation better or worse?
2. Do different stories give different results?
3. What practices work best in creating stimuli for semantic fieldwork?

METHOD

The background is a gradient of deep blue and purple, speckled with white dots resembling a starry sky. Overlaid on this are several faint, white geometric patterns. In the top right, there is a large circular scale with degree markings from 0 to 210 and concentric circles. In the bottom right, there are concentric circles with arrows indicating a clockwise direction. In the bottom left, there are partial concentric circles with arrows. In the top left, there is a small circular arc with an arrow.

THREE MAIN STAGES

1. First
Attempts

2. Pilot
test

3. Main
Study

First attempts...

- Anna picked the most apples, her brother picked fewer apples.

Pilot Test

- Anna picked the most apples.

- Anna's brother picked fewer apples than Anna did.

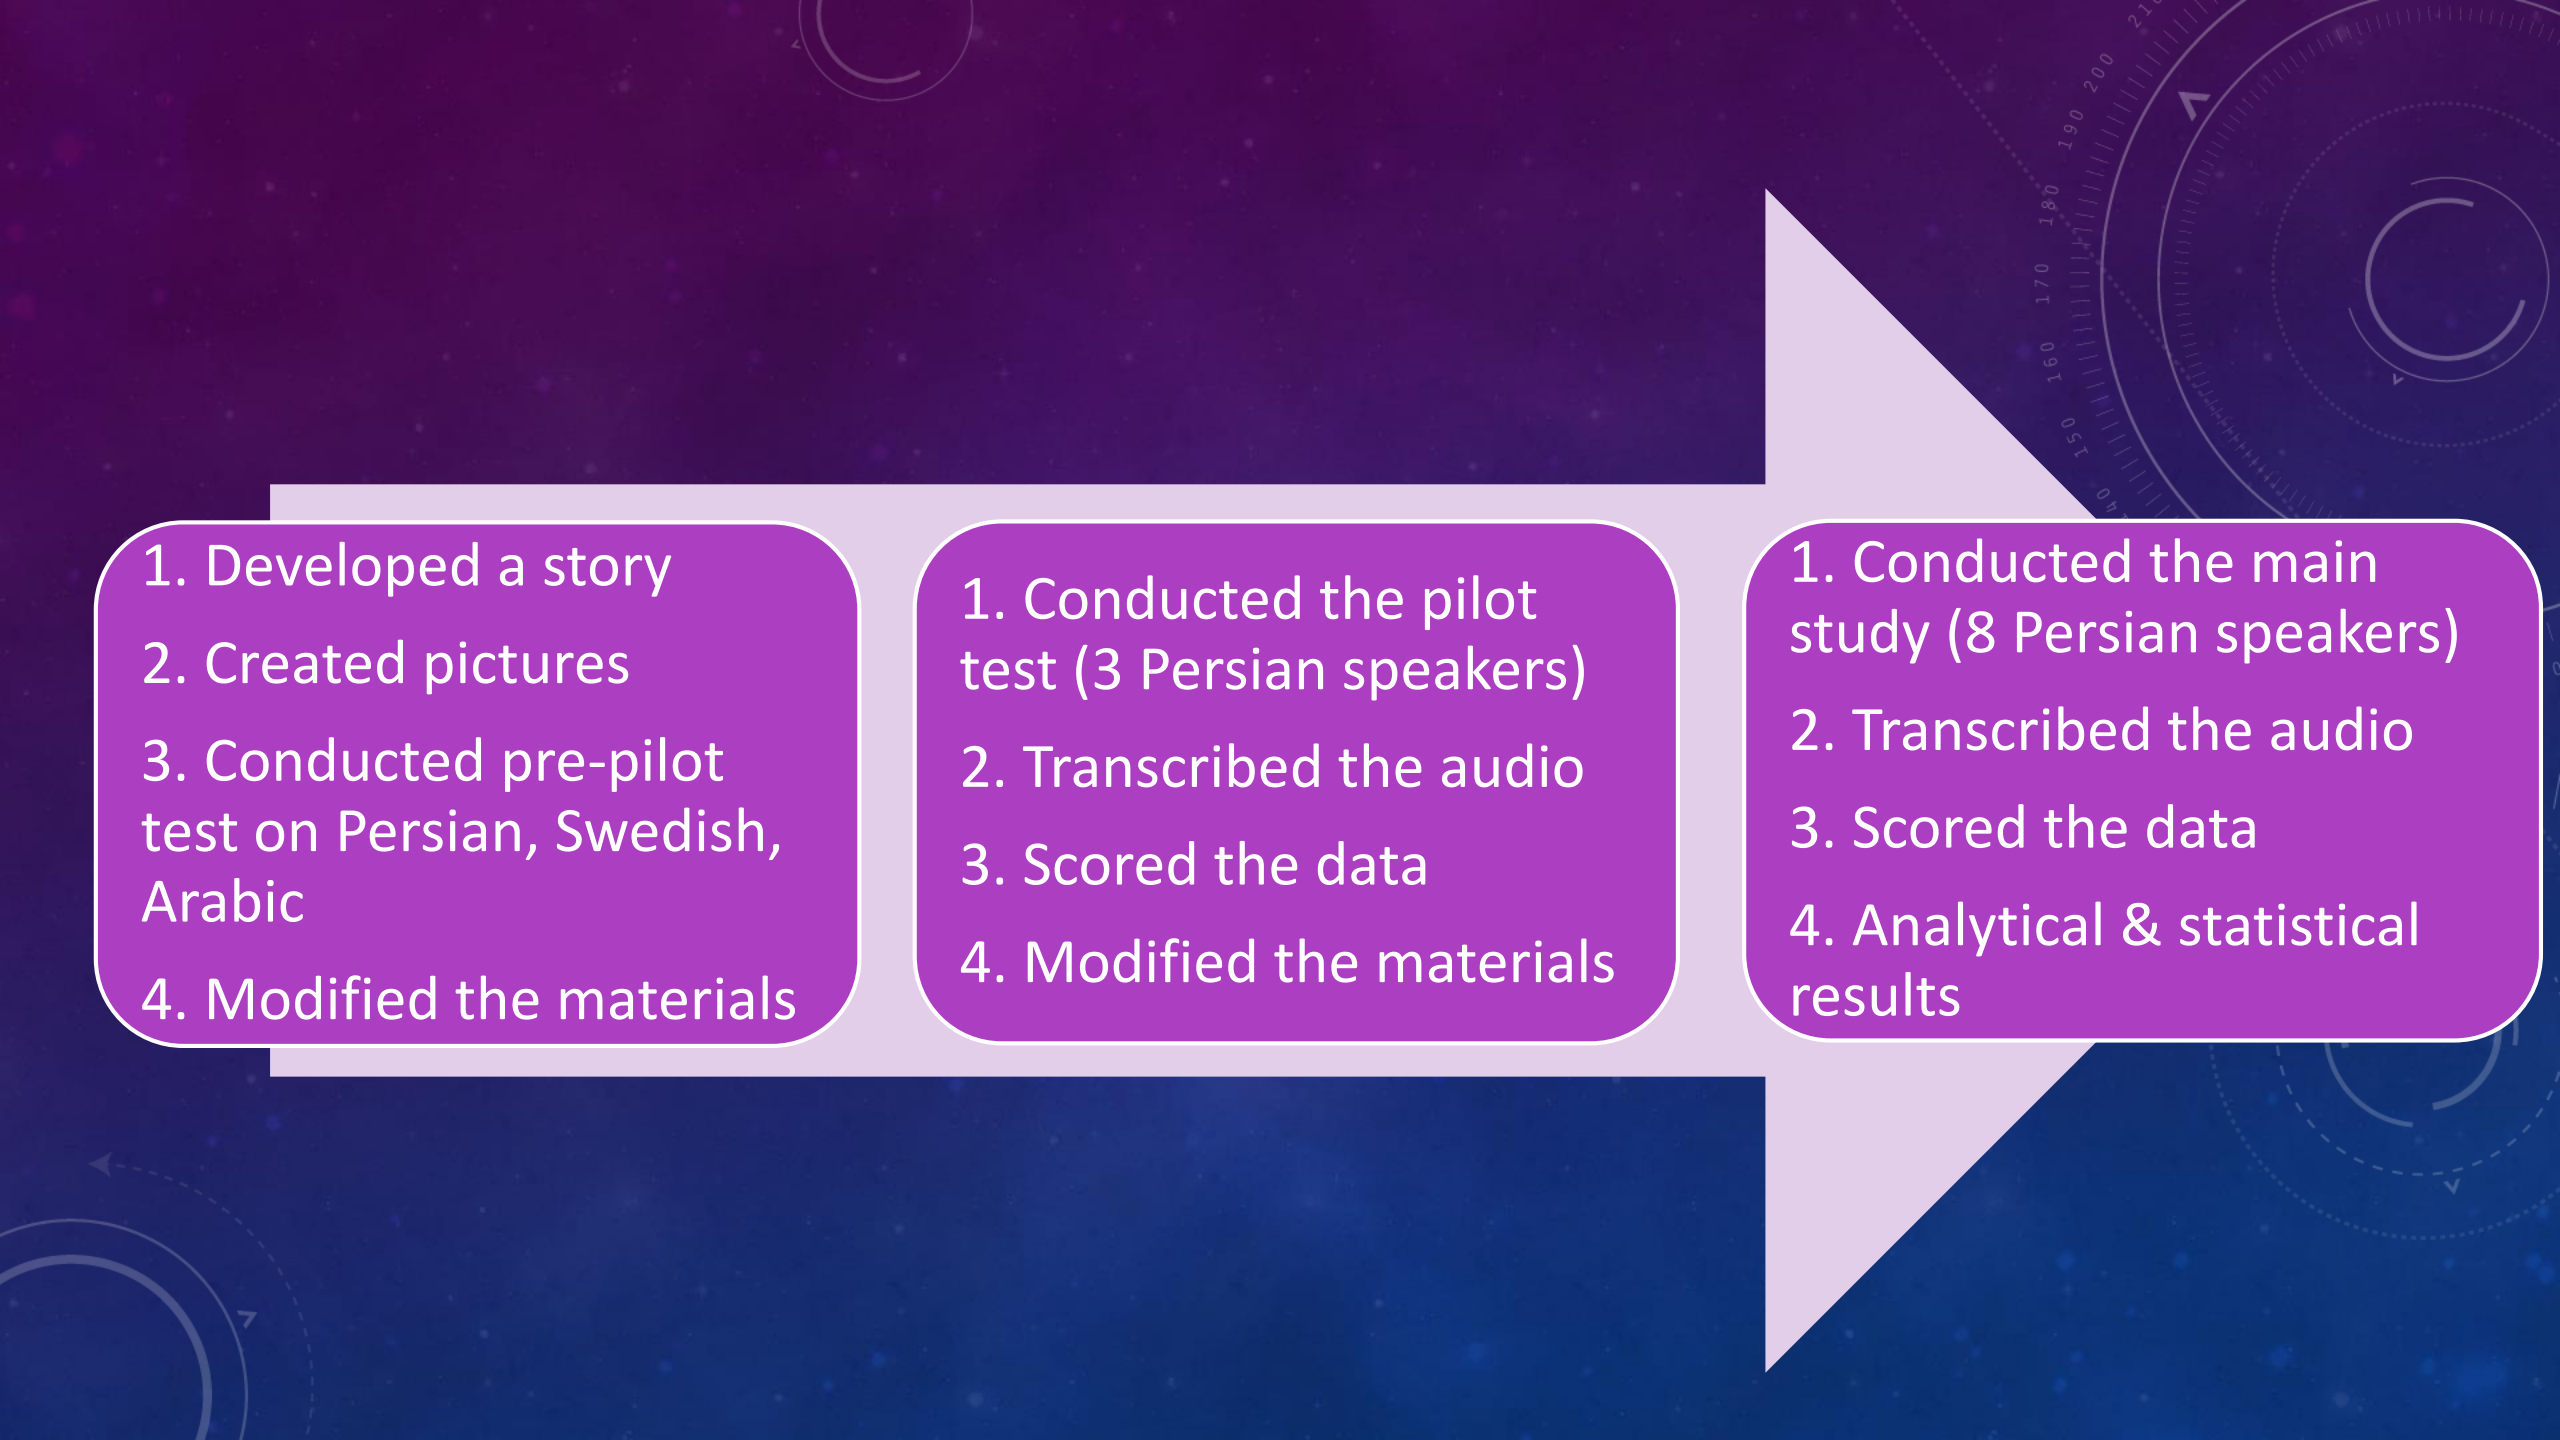

Main Study

- 16) Anna picked the most apples.

- 17) Anna's brother picked fewer apples than Anna did.

- 
1. Developed a story
 2. Created pictures
 3. Conducted pre-pilot test on Persian, Swedish, Arabic
 4. Modified the materials

1. Conducted the pilot test (3 Persian speakers)
2. Transcribed the audio
3. Scored the data
4. Modified the materials

1. Conducted the main study (8 Persian speakers)
2. Transcribed the audio
3. Scored the data
4. Analytical & statistical results

CHANGES AFTER THE PILOT TEST

Example 1

7) Anna's sister said to her, "The only reason that he won is that he is taller than us..."

Example 2

Before

After

22) ...I bet I can drink more juice than both of you.”

Example 3

12) But Anna finished last.

Example 4

**(*)...What matters is who can run the fastest!
I bet we can run faster than he can."**

8) ...Let's see who can run the fastest!

9) ...I bet we can run faster than he can.

THE MAIN STUDY

METHODOLOGY FOR THE MAIN STUDY

- 8 Persian speakers participated.
- Participants (3 female and 5 male) were between 30-42 years old, all highly educated and fluent in English.
- Each consultant participated in 4 tasks.
- Each data elicitation session took around 1 hour.

STORIES

- What Matters (WM)
 - By us
- Bake-off (BK)
 - From Totem Fields Storyboards

ORDER COUNTERBALANCING

MethodOrder		
StoryOrder	SB before PT	PT before SB
WM before BK	SB/WM PT/WM SB/BK PT/BK (2 participants)	PT/WM SB/WM PT/BK SB/BK (2 participants)
BK before WM	SB/BK PT/BK SB/WM PT/WM (2 participants)	PT/BK SB/BK PT/WM SB/WM (2 participants)

FAITHFULNESS

How do we measure success in eliciting the target construction?

→ Faithfulness

- ❖ 1 for close translation (target construction elicited)
- ❖ 0 for any of the following:
 - rough idea
 - forgotten
 - misinterpretation

PERSIAN COMPARATIVES

Morphological strategy:

Sara az Maryam **zerang-tar** ast-ø

Sara from Maryam **smart-CMPR** be.PRES-3sg

'Sara is smarter than Maryam'

PERSIAN SUPERLATIVES

1. Morphological:

Sara **zeraṅ-tar-in** danešamuz ast-ø

Sara **smart-CMPR-SUP** student be.PRES-3sg

'Sara is the smartest student'

2. CMPR+ALL:

Sara **az hame**-ye danešamuz-an **zeraṅ-tar** ast-ø

Sara **from all**-EZ student-PL **smart-CMPR** be.PRES-3sg

'Sara is the smartest student'

EXAMPLE OF FAITHFUL TRANSLATION

Persian:

Pas u az deraxt-e **kutah-tar-i** bala raft-ø
So he from tree-EZ **short-CMPR**-INDEF up go.PST-3sg
'So, he climbed a shorter tree'

Score: 1

4. So he climbed a **shorter** tree.

EXAMPLE OF FAITHFUL TRANSLATION

Persian:

Barande kas-i-e ke **bozorg-tar-in** **qalb** ro dar-e
winner one-INDEF-is that **big-CMPR-SPRL heart** OM have-3sg
'The winner is the one who has the biggest heart'

Score: 1

31) The winner is the one who has
the biggest heart.

EXAMPLE OF FAITHFUL TRANSLATION

Persian:

...be-bin-im ki az hame sari-tar mi-do-e
SUBJ-see-1pl who from all fast-CMPR IMFV-run-3sg
'Let's see who runs faster than all'

Score: 1

The M strategy is ungrammatical for adverbial superlatives.

*... be-bin-im ki sari-tar-in mi-do-e

8)...Let's see who can run **the fastest**!

EXAMPLE OF 'ROUGH IDEA'

Persian:

...be-bin-im ki barande mi-šav-ad
SUBJ-see-1pl who winner IMFV-become.PRES-3sg
'...Let's see who wins'

Score: 0

8)...Let's see who can run **the fastest!**

EXAMPLE OF 'MISINTERPRETATION'

21 ...Whoever drinks **the most juice** is the winner...

Persian:

Kas-i ke **biš-tar-e** **abmive** ro be-nush-e barandeh ast-ø
one-INDEF that **much-CMPR-EZ juice** OM SUBJ-eat.PRES.3sg winner be.PRES-3sg

'The one who drinks most of the juice is the winner'

Score: 0

EXAMPLES OF 'FORGOTTEN'

3) So she to a baking contest
challenged him

13) There was an apple tree in the
garden, and many of the apples in
the tree were ripe.

26) Together, they drank
most of the juice.

Scores: 0

RESULTS

COMPARISON OF SB & PT

Higher faithfulness scores using PT for the Bake-off story

- Average increase: 10%

Higher faithfulness scores using PT for the What Matters story

- Average increase: 20%

STATISTICAL ANALYSIS WITH R

	Estimate	Std. Error	z value	Pr(> z)	
(Intercept)	4.6456	0.9375	4.956	7.21e-07	***
MethodSB	-3.0715	0.4429	-6.935	4.06e-12	***
StoryWM	-1.3053	0.5959	-2.190	0.0285	*
MethodOrder	0.3340	0.3531	0.946	0.3442	
StoryOrder	0.6696	0.3421	1.957	0.0503	.

Generalized linear mixed model

Fixed effects: Method, Story, MethodOrder, StoryOrder.

Random effects: Participant, Item.

- Method: Highly significant, big effect.
 - PT yielded higher faithfulness level.
- Story: Significant at 0.05 level.
 - Bake-off story higher faithfulness level.
- Order: No effect of order.

LME3 package, glmer Mod

```
m1 <- glmer(Faithfulness ~ Method + Story + MethodOrder + StoryOrder + (1|Participant) + (1|Item), family="binomial", data=data)
```

COMFORT

- 7 out of 8 participants felt more comfortable when text was present.
- One participant preferred having no text.

FUN

NATURALNESS

- Storyboards are designed to elicit more natural speech.
- Naturalness was not measured directly here.
- But there is some evidence that Persian speakers were able to resist the influence of the English text.

EXAMPLE: RESISTING ENGLISH TEXT

The English prompt:

13. "No, I can clean the **fastest!**"

Persian:

13. Na man **sari-tar** tamiz mi-kon-am

No I **fast-CMPR** clean IPFV-do-1sg

'No, I clean faster'

Ungrammatical:

*Na man **sari-tar-in** tamiz mi-kon-am

No I **fast-CMPR-SPRL** clean IPFV-do-1sg

CONCLUSIONS

1. Picture-aided translation yields more faithful translations
 - 20% for What Matters
 - 10% for Bake-off
2. More faithful translations for Bake-off than What Matters
 - Possibly due to length of story and sentences, difficulty, narrative structure...
3. Having the text present usually feels more comfortable
4. Picture-aided translation and storyboards are equally fun
5. Consultants can resist the influence of the English text?

PRACTICAL IMPLICATIONS

1. Translation, especially picture-aided translation, may suit your purposes as a fieldworker.
2. For storyboards, keep it short & simple.
3. For longer stories divide them up to sections.

MORE TIPS

1. One sentence per image
2. One target construction per sentence
3. Number the sentences
4. Make images realistic/fun, but not distracting
5. Place an arrow on the subject of the sentence
6. Hide participants that are not in the sentence

The background is a gradient of dark blue and purple, speckled with small white dots. On the left side, there are several concentric circles and a large circular scale with degree markings from 140 to 260. Some circles have arrows indicating a clockwise direction. The text 'THANK YOU!' is positioned on the right side of the image.

THANK YOU!
